The Illinois Tollway 2023 Engineering Cooperative Education (Co-Op) program is designed to enhance students' academic curriculum through hands-on work experience on active construction projects.* Under the guidance of an Illinois Tollway engineer, students will perform engineering work arranged in the phases of construction, design and planning.

Embedded within technical learning and skill application will be soft skills trainings such as presentation skills, professional communication and others provided by the Illinois Tollway's Professional Learning Department.

Flexible scheduling for full-time participation during the summer with some part-time and full-time during the school year.

Please Note: Reliable transportation to and from active construction sites, consulting firms, and the Tollway's Central Administration Building is required.

Apply by March 31
