# University of Chicago Internship Translational Data Science

## Company Description

The Center for Translational Data Science at the University of Chicago is a research center pioneering the discipline of translational data science to advance biology, medicine, and environmental research. We architect ecosystems of large-scale commons of research data, computing resources, applications, tools, and services for the broader research community to use data at scale to pursue scientific inquiry, and accelerate discovery. These growing data commons offer petabytes of rich research data to scientists across the world.

## Responsibilities:

- Develop and implement a flexible mechanism for translating data and metadata from Portable Format for Bioinformatics to a Frictionless data package.

## Preferred Qualifications

- Python programming experience, writing software to manipulate data
